

## $Course\ Syllabus:\ Data\ Wrangling\ and\ Data\ Analysis\ (INFOMDWR)$

| Department         | Department of Information and Computing Sciences |  |
|--------------------|--|--|
| Course title       | Data Wrangling and Data Analysis (INFOMDWR)      |  |
| Academic Quarter   | Block 1  |  |
| Quarter Start Date | 07/09/2020                                       |  |
| Quarter End Date   | 6/11/2020  |  |
| Class Schedule     | Lectures: Mon. and Tue. 9:00 – 10:45             |  |
|                    | Tutorials : Mon. and Tue. 13:15 – 15:00          |  |
|                    | Seminars : Thu. 13:15 – 15:00                    |  |
|                    | Exam 1: Thu. 15:30 – 15:50                       |  |
|                    | Exams 2 & 3: Fri. 15:30 – 15:50                  |  |

| Instructor(s) |                |                |                 |              |  |  |

|                       |                   |  |  |  |  |
|                       |                   |  |  |  |  |

| Course Information                       |   |  |  |
|--|---|--|--|
| Course Objectives                        | In this this course, you will learn to:   |  |  |
|  | <ol> <li>Know, explain, and apply data retrieval from existing relational and nonrelational databases, including text, using queries build from primitives such as select, subset, and join both directly in, e.g., SQL and through a rjson interface.</li> <li>Know, explain, and apply common data clean-up procedures, including missing data and the appropriate imputation methods and feature selection.</li> <li>Know, explain, and apply methodology to properly set-up data analysis experiments, such as train, validate, and test and the bias/variance trade-off.</li> <li>Know, explain, and apply supervised machine learning algorithms, both for classification and regression purposes as well as their related quality measures, such as AUC and Brier scores.</li> <li>Know, explain, and apply non-supervised learning algorithms, such as clustering and (other) matrix factorization techniques that may or may not result in lower-dimensional data representations.</li> <li>Be able to choose between the different techniques learned in the course and be able to explain why the chosen technique fits both the data and the research question best.</li> </ol> |  |  |
| Course Description from<br>Program Guide | Data do not fall from heaven, but are created, manipulated, transformed, and cleaned - in any data analysis, therefore, the   |  |  |

|                    | treatment of the data itself is just as important as the modeling techniques applied to them. In this course, you will learn to perform predictive data analysis to gain insights for science and business applications, while simultaneously keeping track of where these data originated and handling them yourself.  The course consists of two parts, data wrangling and data analysis, which are intertwined. Each week, you will do a series of increasingly complex computer exercises with online short exams each Thursday and Friday.   |
|--------------------|---|
| Required Knowledge | Demonstratable knowledge of Statistics up to regression and analysis of variance, as well as some experience in programming in languages such as R and Python are the pre-requisites.   |
